CPR100

Customization card system

Description

Planeta's card personalization system is a solution for electrical and graphic personalization of cards using different technologies. It allows you to perform tasks such as:

- Serial number printing in a variety of formats using a configurable layout.
- Writing ISO14443 card sectors from an input file.
- Key exchange and access modes for ISO14443 cards.
- Capture and processing of card information in batches, which allows you to generate a file listing the serial numbers in different formats of the cards in a batch.
- Separation of problem cards from good ones and report generation.

These tasks are carried out using card printers and the LM700 tractor. 125Khz cards compatible with the ISO14443 standard are accepted, and the operations that can be performed depend on the card technology used.

Partnumbers

- CPR100

Licensing:

- Per installation

Applications

- Card personalization
- Card inventory survey
- Access control
- Production verification

Contents

- Application software

Compatibility:

- Windows 7, 8, 10 and 11.
- Printer Evolis Dualis
- LM700

Supported media

- ISO 14443A (Mifare: Classic, Desfire, Ultralight)
- ISO 14443B (Crypto RF, Micropass)
- Jewel
- 125KHz IDEX cards.
