VM Manager

SAM BASED Agnostic Card Reloading Solution

Description

VM Manager is software that integrates with online and offline systems designed to configure and manage equipment contained in vending machines.

It allows defining the type of payment, communication protocol with the machine, product tables with different prices, credit lists (available for proprietary cards), among other functions.

With data collection, it is possible to issue closing reports containing sales data such as values, transaction time, user, equipment, product, and various movements.

VM Manager works with the following sales modules (enabled through licenses):

- Online
- Offline
- POS
- Telemetry

The sales modules are customizable and can be enabled according to the customer's needs. See more details in "Chapter Sales Modules for Vending Machines".

Partnumbers

- VM-MANAGER (I0142)

Contents

- VM MANAGER software
- Configuration Card
- Collection Card
- Program Exchange Card
